Custom Wake-up Response

Custom Wake-up Response
1. Course Content
2. Preparing Audio Files
3. Loading Audio Files

1. Course Content

- Add audio files to the multi_brains program audio library to customize the voice response audio after wake-up.

> **Note**
>
> - This part of the tutorial is for reference only for users who need to customize a personalized voice response audio; it does not affect normal use.
> - If you do not need to customize a personalized response audio, you can skip this lesson first.

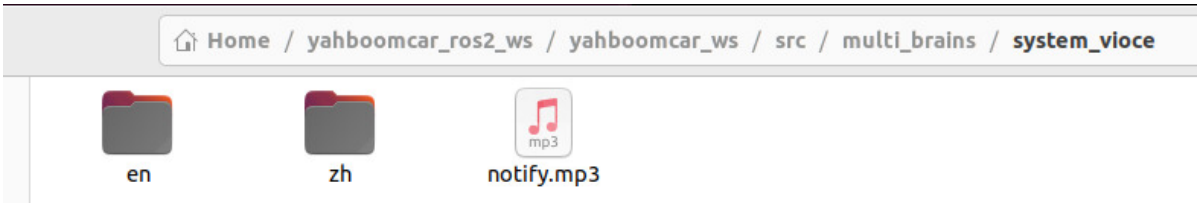

2. Preparing Audio Files

- Here, the **audio material for the voice response can be downloaded and prepared by yourself**.

3. Loading Audio Files

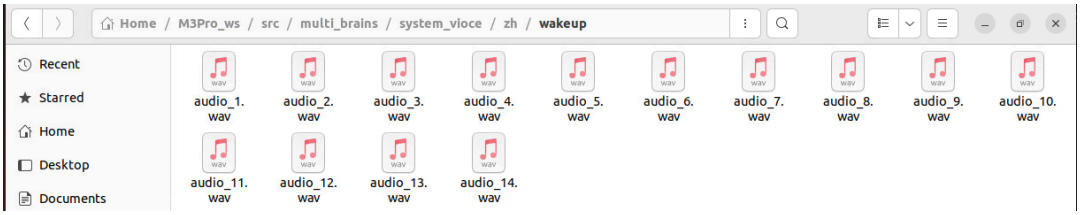

- multi_brains system audio path:

```
~/yahboomcar_ros2_ws/yahboomcar_ws/src/multi_brains/system_vioce
```

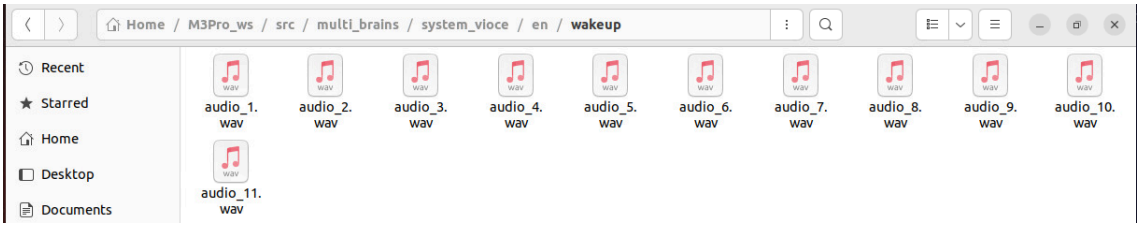

- Among them:
  - zh is the Chinese reply voice, suitable for domestic users. Put the prepared audio files into the directory:

    ```
    ~/yahboomcar_ros2_ws/yahboomcar_ws/src/multi_brains/system_vioce/zh/wake up
    ```

- en is the English reply voice, suitable for international users. Put the prepared audio files into the directory:

```
~/yahboomcar_ros2_ws/yahboomcar_ws/src/multi_brains/system_vioce/en/wakeup
```

- After that, when the multi_brains program is started, it will automatically load the audio files in the corresponding directory, and will randomly play the personalized reply voice when the user wakes it up.
