Multimodal Visual Understanding + Robotic Arm Gripping

Multimodal Visual Understanding + Robotic Arm Gripping

1. Course Content
2. Preparation
3. Running the Cases
4. Source Code Analysis

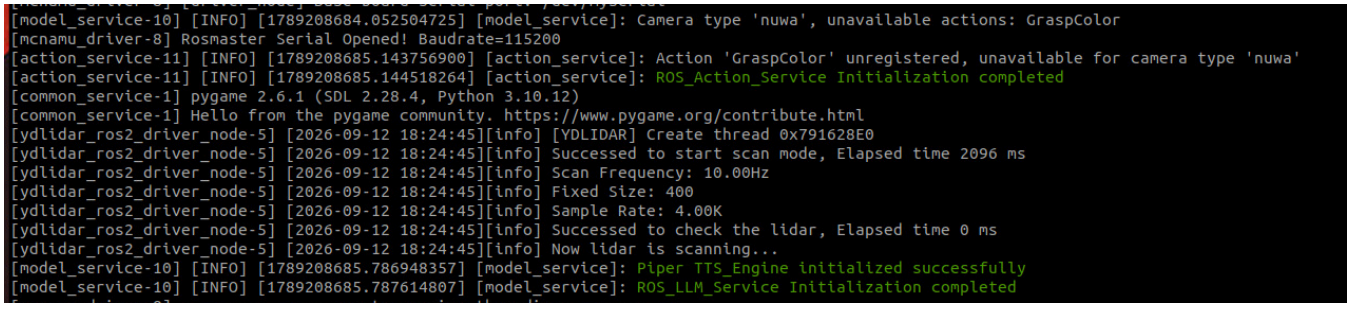

1. Course Content

Run the example program to perform a comprehensive task using the robot's visual understanding combined with the robotic arm gripping function.

> **Note**
>
> - The only difference between the text version and the voice version is the command input method; the text version does not include the speech recognition and speech synthesis playback steps.

2. Preparation

```
ros2 launch yahboomcar_bringup dify_llm_agents.launch.py  use_camera:=true
```

- Text interaction terminal

```
dify_tui
```

- Use the `/clear` command to clear the terminal conversation history, and ctrl+q to exit the interaction terminal

3. Running the Cases

- Find the red block in front of you and grasp it; the wooden block used is 30x30x30mm.
- Please help me remove the AprilTag in front of you whose height is greater than 5 cm; the wooden block used is 30x30x60mm.

4. Source Code Analysis

Refer to the analysis of the corresponding chapter of AI Model - Voice Version; the source code is the same, only the interaction method differs.
