> - WhatsApp is suitable for international users.

Course Overview

- WhatsApp is one of the mobile chat interaction methods supported by OpenClaw. After binding the WhatsApp channel, users can chat with the robot anytime and anywhere through their mobile phone
- Supports sending text and voice messages to control the robot, suitable for international users
- Combined with the Robot-Control plugin, you can remotely control the robot to perform various tasks via WhatsApp

Learning Objectives

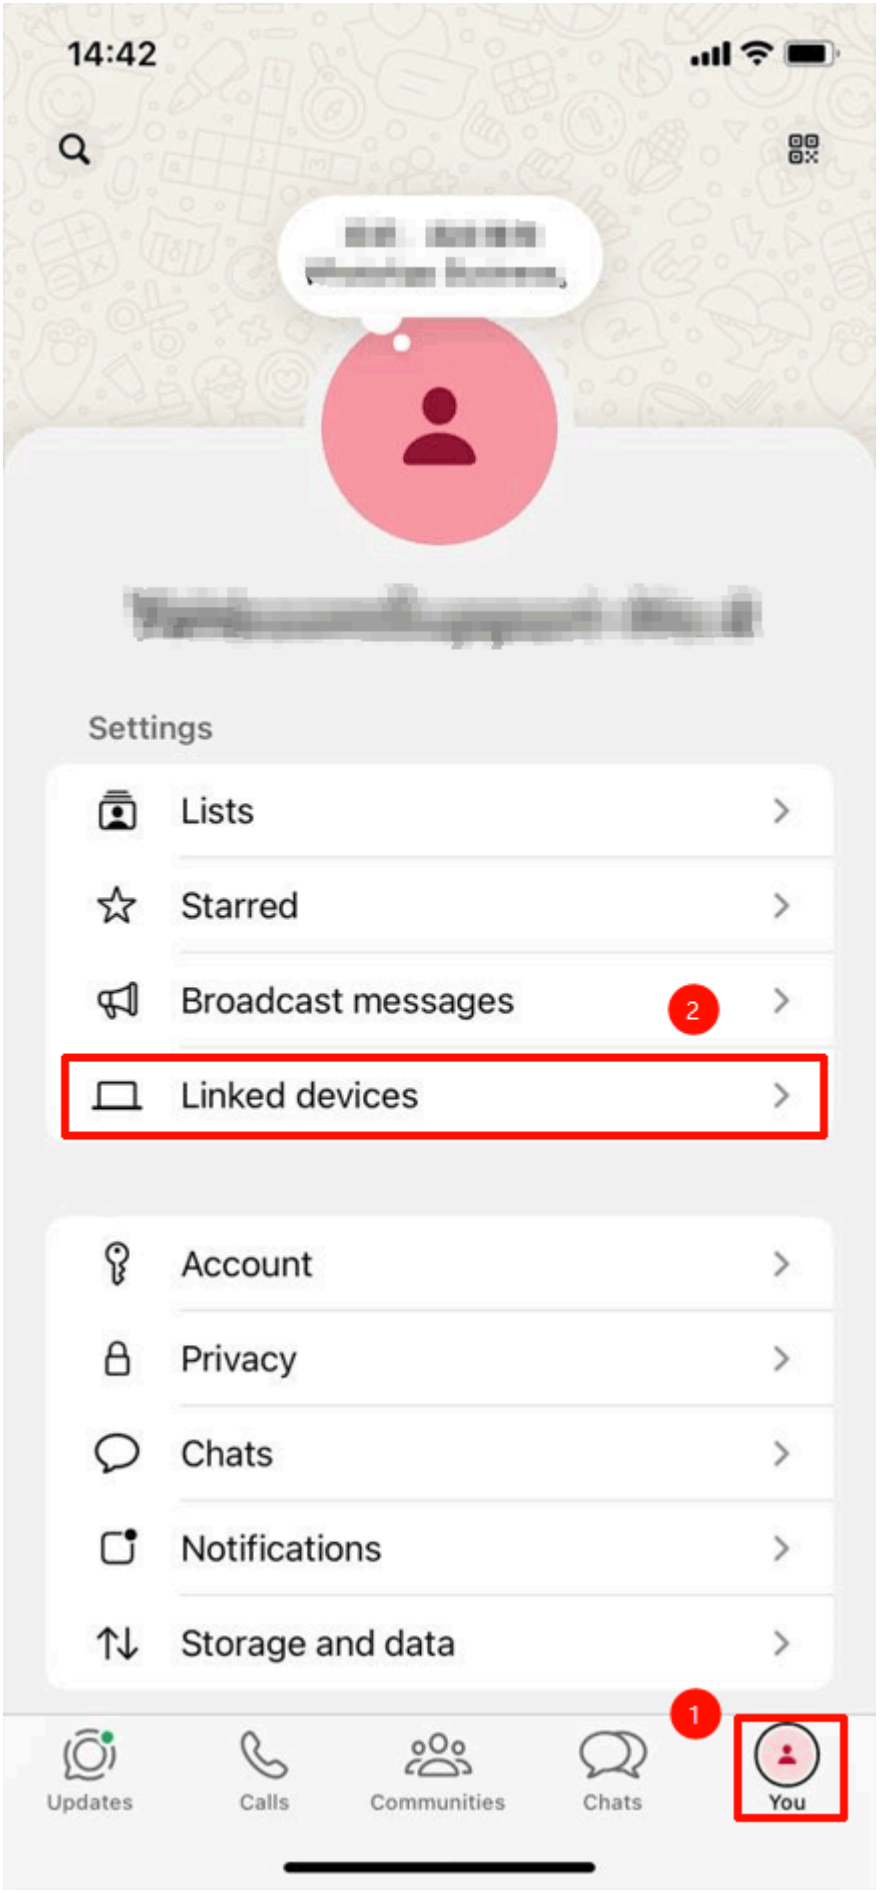

1. Learn to bind the WhatsApp channel and complete device association by scanning a QR code
2. Master the method to configure the WhatsApp receiving number in OpenClaw WebChat
3. Be able to conduct text conversation interactions with the robot via WhatsApp

2. Binding WhatsApp

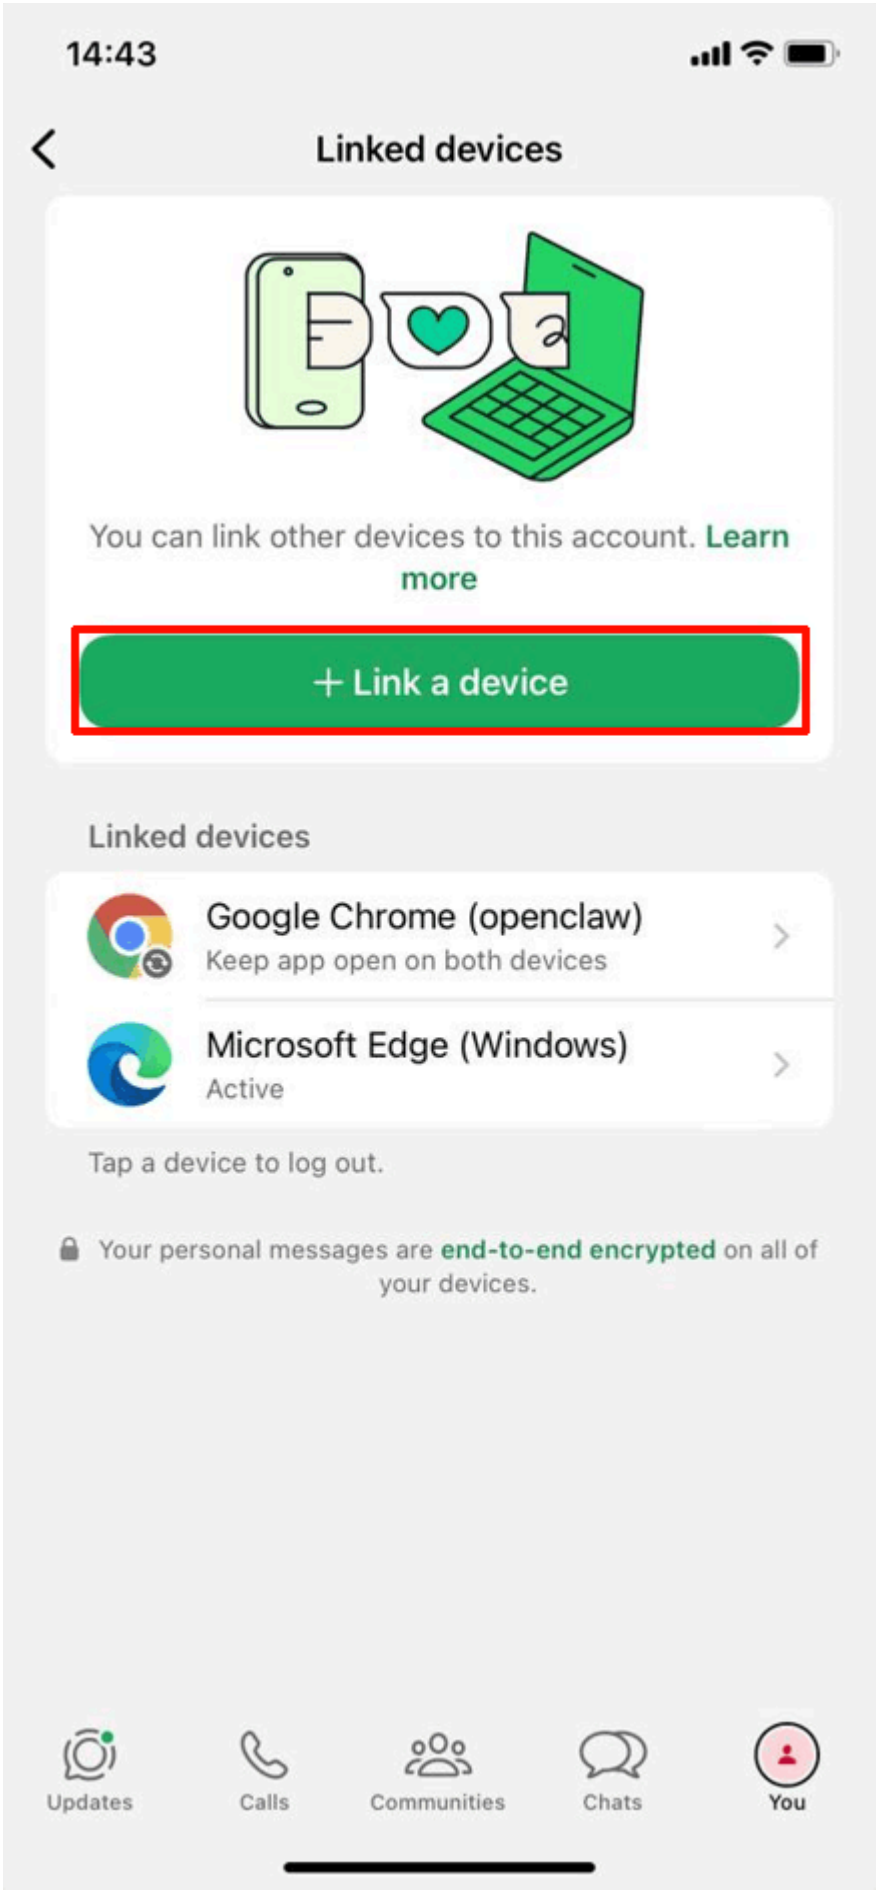

- Enter in the terminal:

```
openclaw channels login --channel whatsapp
```

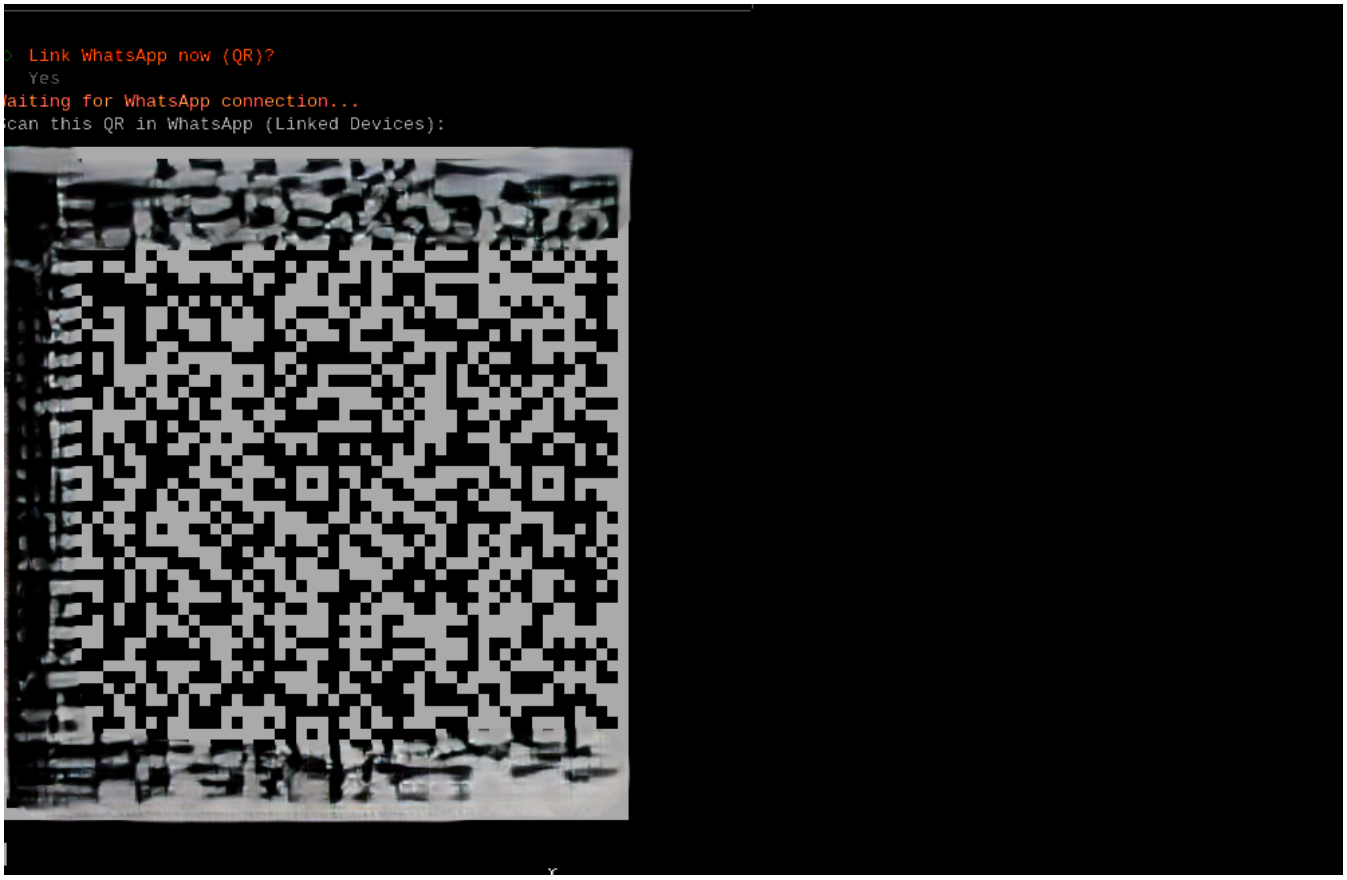

- Open WhatsApp on your phone, and tap your profile → Linked Devices

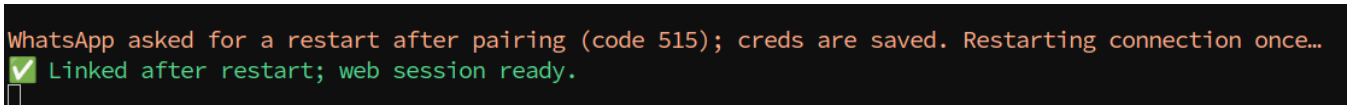

- Tap Link New Device, then scan the OpenClaw QR code

- Scan the QR code with your phone to connect

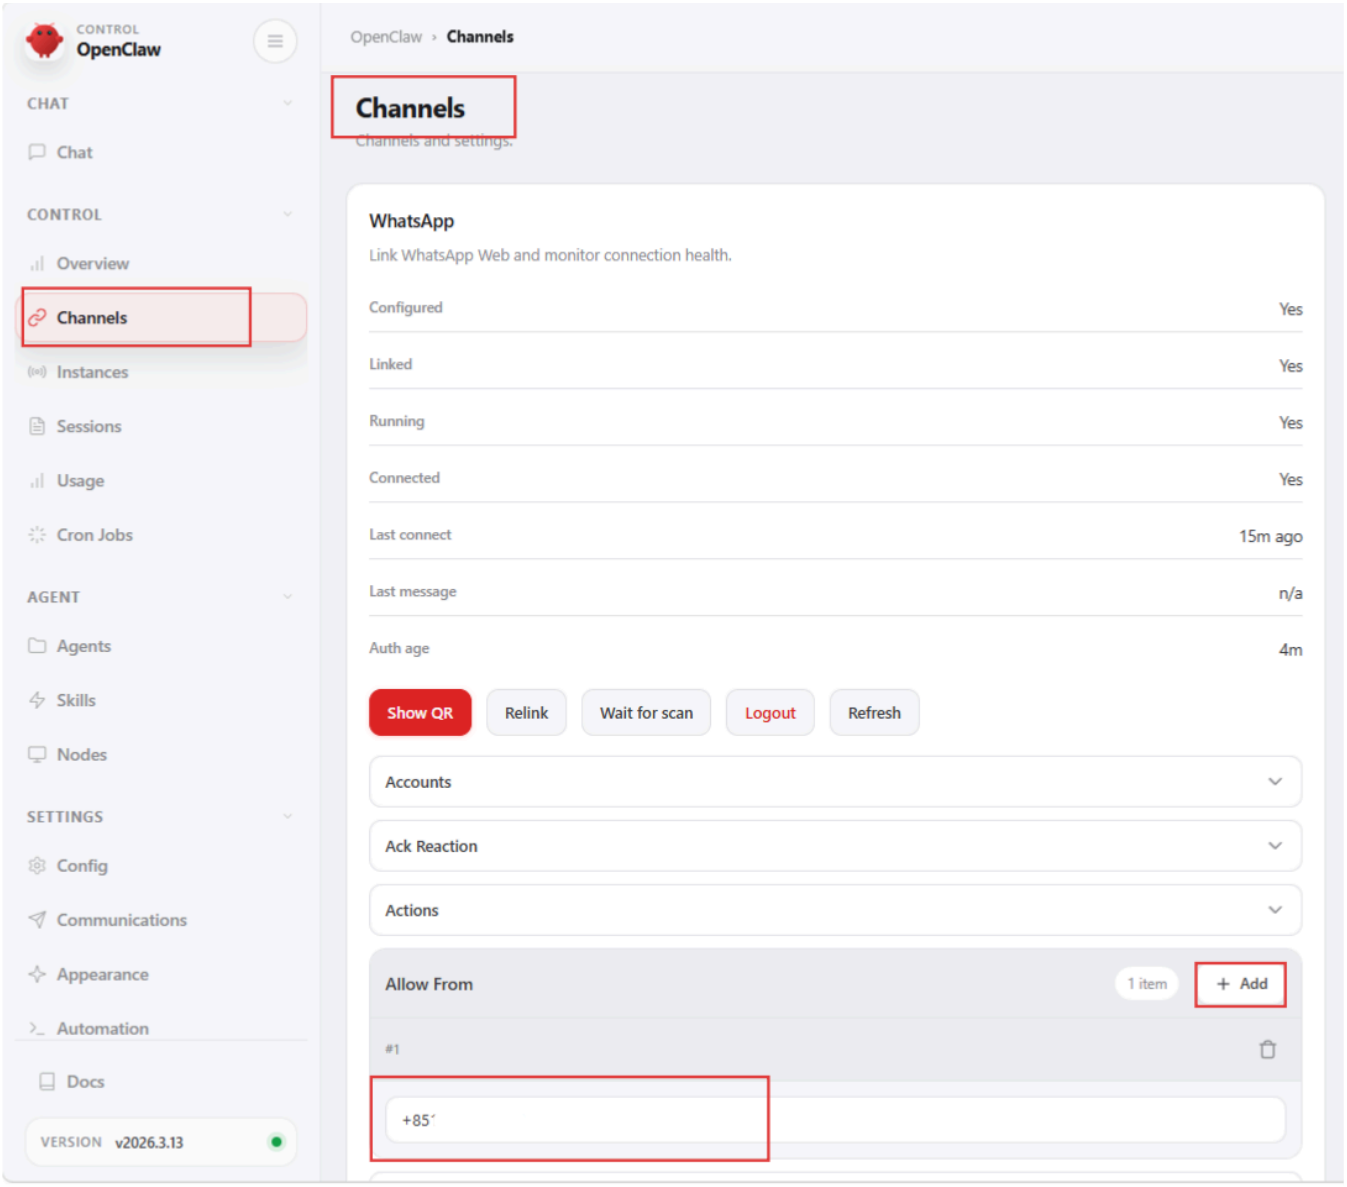

- When "Linked after restart" appears, the connection is successful

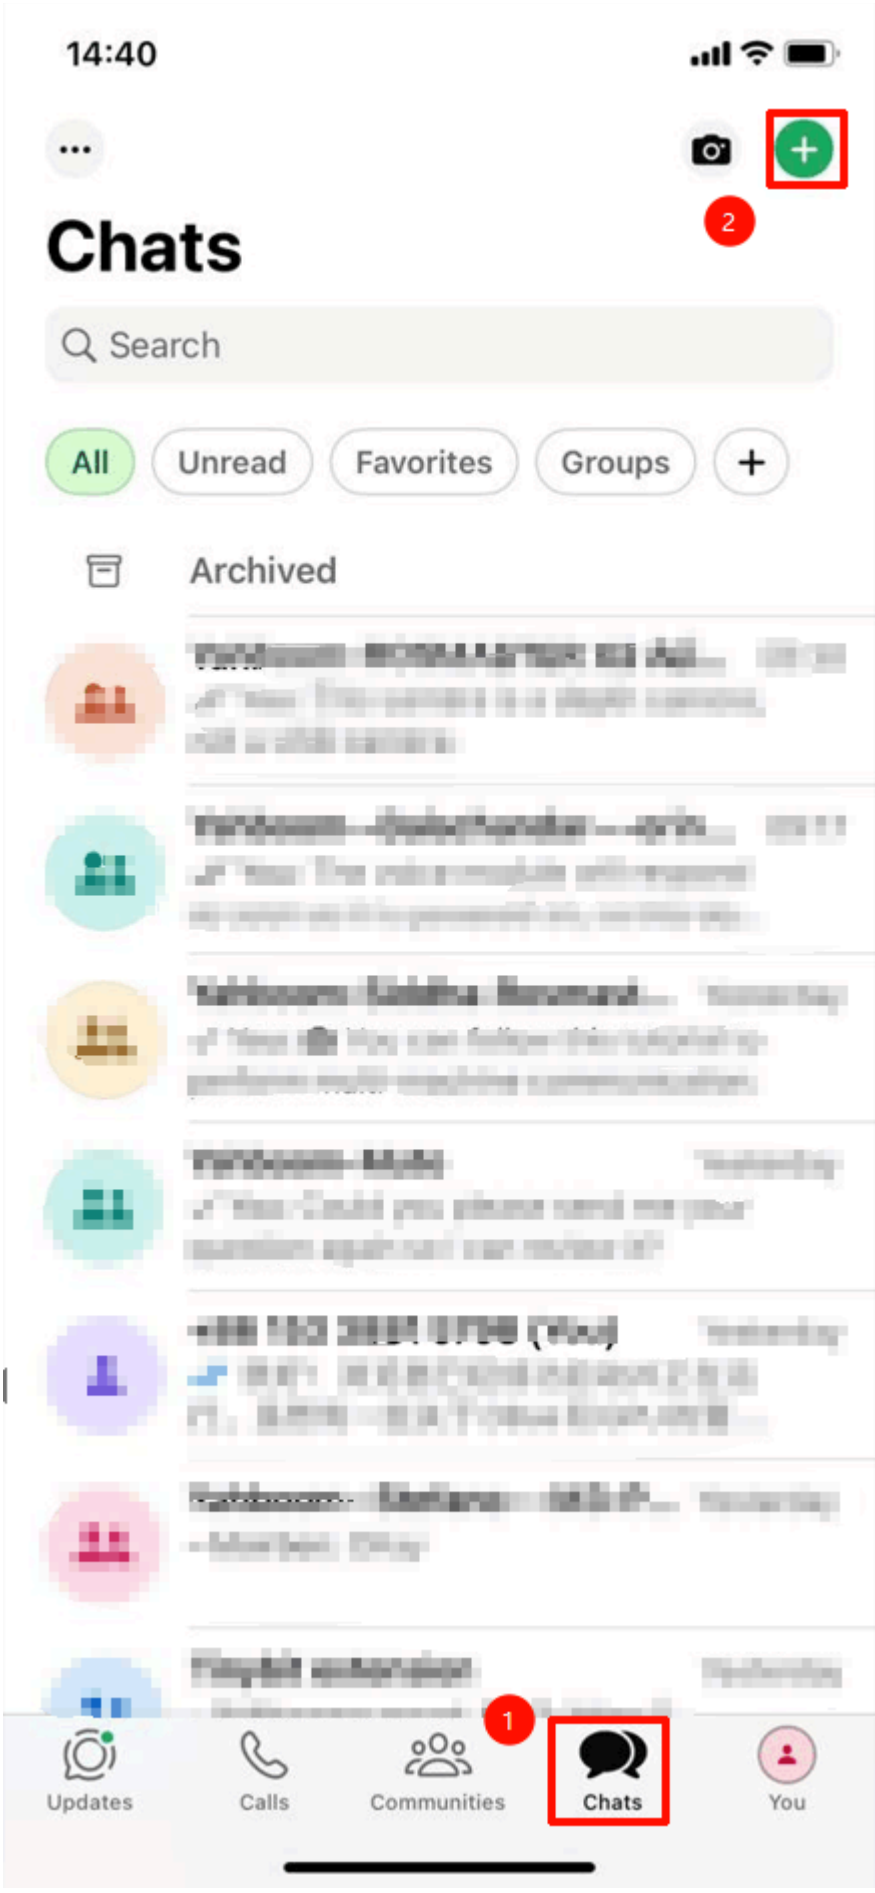

- Restart the OpenClaw Gateway

```
openclaw gateway restart
```

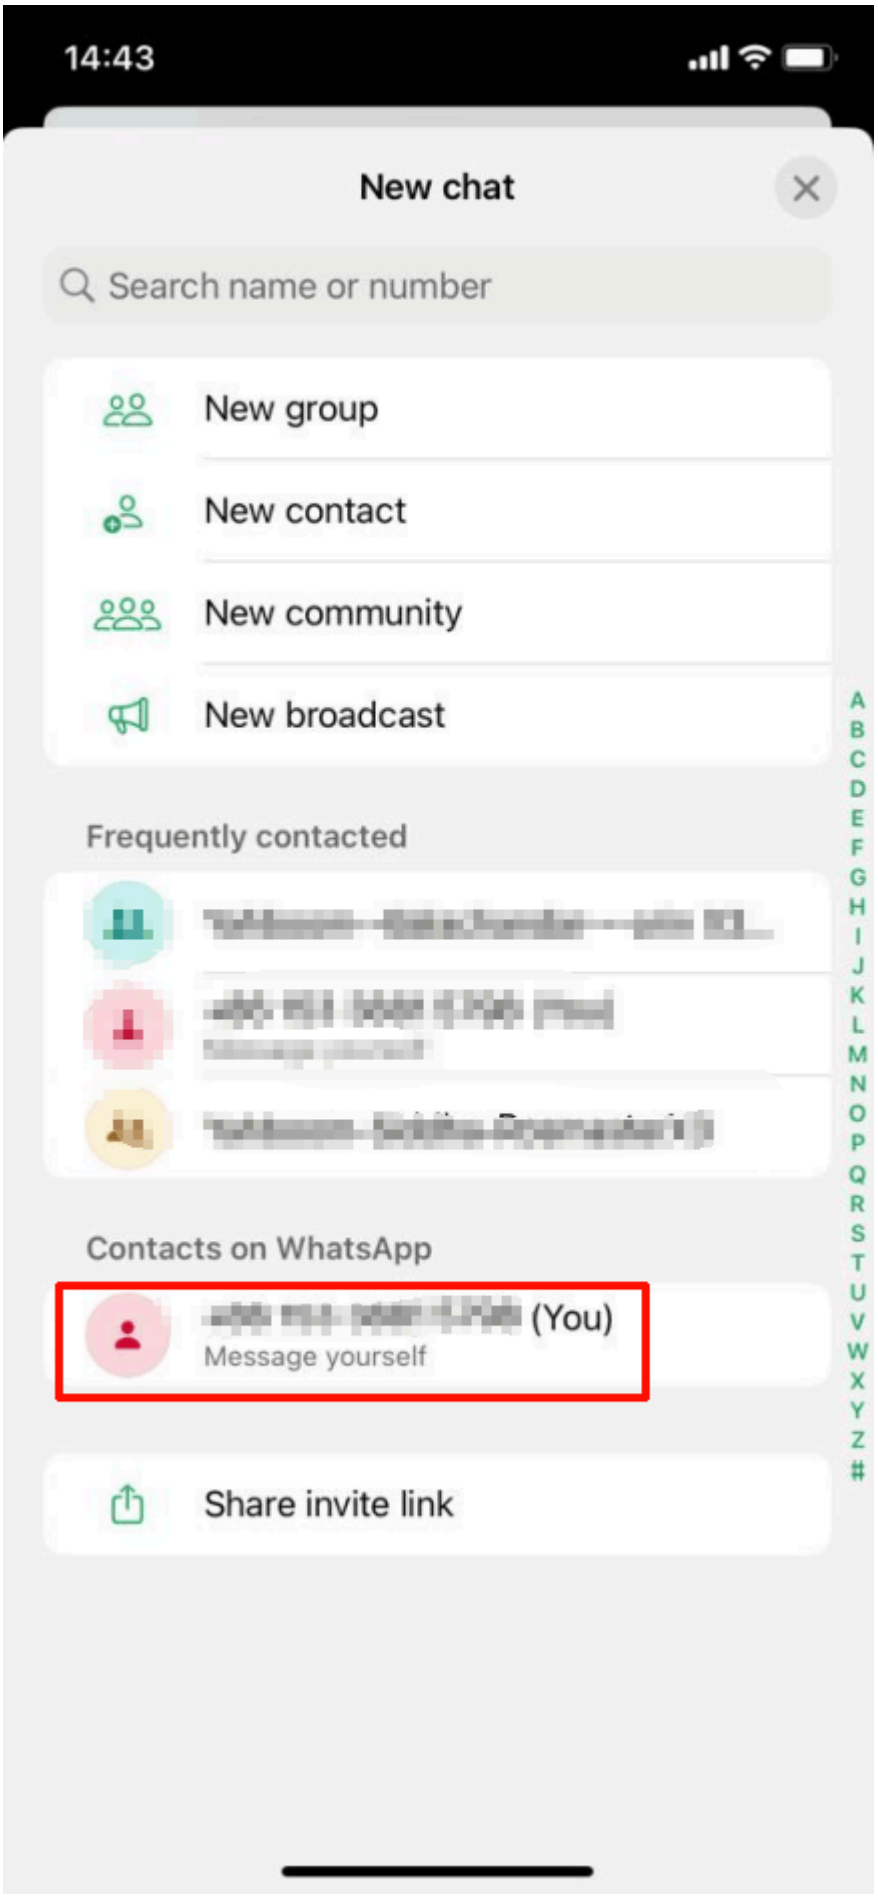

- Open the OpenClaw WebChat page
    - For how to open it, refer to 【01-openclaw webchat interaction】
- Click in sequence Channels → WhatsApp → Allow From → + Add
    - Enter your own phone number; configuration complete

3. Conversation Interaction
